**OHIO AUTO INSURANCE PROGRAM
STATE FARM MUTUAL AUTOMOBILE INSURANCE COMPANY
Filing Memorandum**

July 15, 2013 for New and Renewal Business

Our last general rate change in Ohio was effective November 05, 2013 for New and Renewal Business and produced a -0.5% all coverages change.

With this filing, we are proposing an overall change of 1.1% effective July 15, 2013 for New and Renewal Business. The changes by coverage are summarized in the table below:

Coverage	Vehicle Type	Proposed % Change
BIPD Liability	Private Passenger	3.0%
Medical Payments	Private Passenger	3.0%
Comprehensive	Private Passenger	0.0%
Collision	Private Passenger	0.0%
Uninsured Motorist Coverage	Private Passenger	-5.0%
Emergency Road Service	Private Passenger	11.1%
Rental Reimbursement	Private Passenger	-4.8%
All Coverages	All Types	1.1%

INDICATED RATE CHANGES

The enclosed Exhibits 1-9 set forth the actuarial calculation of the indicated private passenger rate level changes for each of the major coverages, as well as for all coverages combined. As shown in Exhibit 9, the indicated rate level change for all coverages combined is +6.3%. The indicated rate changes are based upon projected experience for the year centered around April 15, 2014. To develop the projected underwriting experience, we have used the 2011 through 2012 underwriting experience as a database. The loss levels are projected based upon evaluations of the future claim cost and claim frequency. The actual underwriting experience is displayed in Exhibit 1.

Exhibit 2 displays the adjustments made to the actual underwriting experience. We adjusted the incurred losses and underwriting expenses to account for reserve changes. In addition, we adjusted the comprehensive coverage incurred losses to reflect an expected provision for catastrophic loss. The latest year of catastrophic losses is given 10% weight and the prior catastrophe provision is given 90% weight. Exhibit 3 displays the adjusted underwriting experience.

Another necessary adjustment to our experience is to reflect the current rate level in the earned premium. Exhibit 4 explains the current rate level adjustments in detail. Exhibit 5 shows

average paid claim costs occurring in Ohio, as well as the frequency with which claims are occurring on the respective coverages. The trends are developed by fitting the “least squares line of best fit” to the 12 most recent quarterly points by coverage (each point represents a rolling 12 month average).

The selected cost and frequency trends were used to calculate the projected incurred losses. A detailed description of this procedure is provided in Exhibit 6.

Exhibits 7 and 8 outline the calculation of the projected underwriting expense ratios and the projected underwriting experience using the expense ratios. Using this projected underwriting experience, we then develop the rate change indications shown in Exhibit 9.

The 2% allowance for underwriting profit and contingencies in the rate need calculation reflects the total financial needs of the State Farm Mutual Automobile Insurance Company during the time the revised rates will be in effect. In calculating the combined provision for underwriting profit and contingencies, we have reflected our anticipated investment income from all sources. For a more detailed explanation, please refer to enclosed Exhibit 10.

PRIVATE PASSENGER RATES AND RATING RELATIVITIES

Base Rates – We are revising our base rates for BIPD Liability, Medical Payments, Comprehensive, Collision, Uninsured Motorist, Emergency Road Service, and Rental Reimbursement coverages, as displayed in Exhibit 11. The income effects of all the rating factor changes described in this filing were taken into consideration when developing our revised base rates.

Driver Adjustment Factors – We are revising the Driver Adjustment Factors for BIPD Liability, Medical Payments, Comprehensive, and Collision coverages. Exhibit 12 is a summary of the average rate change by coverage and driver characteristics. This exhibit shows the impact of all rating factors, including Driver Adjustment Factors, for a given coverage. The actual Driver Adjustment Factors are shown in the enclosed rate manual pages.

Model Year Factors – We are revising the factors for BIPD, Medical Payments, Comprehensive, and Collision coverages as shown in Exhibit 13. We have also adjusted our base model year to 2013.

Limit Factors – For BIPD Liability coverage, we are revising our limits rating factors towards the companywide guideline as shown in Exhibit 14.

GRG/DRG and Deductible Rating Factors – We are revising the Insurance Rating Group for Collision (GRG) and Comprehensive (DRG) coverages and physical damage deductible factors towards indicated levels. Exhibit 15 details the changes for combined DRG/GRG and deductible factors.

Inexperienced Operator Adjustment – With this rate change we are revising the Inexperienced Operator Adjustment as follows:

Time Licensed	Present Adjustment	Revised Adjustment
0 – 12 Months	+0.15	+0.30
12 – 24 Months	+0.10	+0.20
24 – 36 Months	+0.05	+0.10

This adjustment to the Driver Adjustment Factor applies if the principal driver is over the age of 20 and has not been licensed in the United States or Canada for at least three years.

Location Rating – We are implementing a new method for territorial rating that will allow us to better match price to risk. Latitude and longitude coordinates will establish a network of small territories or “GRID cells” across the state. Each Geographic Rating Identification, or GRID, cell represents an area approximately equal to one square kilometer. The Territory Rating Factors (TRFs) used today will be replaced with Location Rating Factors (LRFs) for eligible policies.

The premium and loss experience used in calculating the LRFs is derived from the exposure in each GRID cell and its immediately surrounding GRID cells. The process begins by collecting data on a given GRID cell and all adjacent GRID cells. Then, starting at the target GRID cell and moving out in concentric GRID cell rings, the method determines whether the aggregate data is adequate to produce a credible result or additional data is needed (no more than 30 miles are considered). In most cases, a target GRID cell by itself will not have adequate experience to produce an actuarially credible result. Thus, the indicated LRF for each GRID cell will generally also be based on experience from its surrounding GRID cells. An exception to this process is that GRID cells near state boundaries will not cross those boundaries to gather data.

Once the relevant data is assembled, the data in each GRID cell ring is adjusted based on its distance from the target GRID cell, such that more weight is given to the GRID cell rings that are in closest proximity to the target GRID cell. After distance weighting is applied, the method proceeds as shown in Exhibit 16.

In this method, a single GRID cell’s experience will be used in the calculations for many nearby GRID cells. This data sharing helps ensure a smoother transition in adjacent GRID cell LRFs between lower and higher cost areas, while still being responsive to local changes in loss experience.

The LRFs have been determined for each GRID cell for BIPD, Medical Payments, Comprehensive, and Collision coverages. The LRFs will apply to private passenger vehicles, motorcycles, motor homes, antiques, classics, use of non-owned cars, and named non-owner policies. All other vehicle types (and coverages) not listed will continue to use the existing territorial system. In addition, vehicles eligible for LRFs whose latitude and longitude values are not accurate to at least the ZIP code level will continue to use their existing TRFs. Updates to data obtained from non-State Farm sources, such as those used to determine Latitude and Longitude, will be used in the subsequent determination of the LRF.

We will be limiting the LRFs to moderate the impact on individual policies. The LRFs are set by limiting the movement between the current average TRFs and the indicated LRFs. The limitations applied vary depending on the difference between the current and indicated factors as described in the following table.

Indicated LRF Change	Applied Change
Less than -20%	-5.0%
-20% to -15%	-4.0%
-15% to -10%	-3.0%
-10% to -5%	-2.0%
-5% to 5%	0.0%
5% to 10%	2.0%
10% to 15%	3.0%
15% to 20%	4.0%
Greater than 20%	5.0%

We will also manage the rate increases in grid cells that have policies currently assigned to more than one territory. In these cases, current rate levels could vary across these boundaries. The changes in LRF for impacted policies will be limited at each renewal for the first five semiannual renewals and the first two annual renewals as follows:

Semiannual Policies

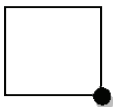

Renewal	Minimum Change	Maximum Change
1 st	-10%	10%
2 nd	-10%	10%
3 rd	-10%	10%
4 th	-10%	10%
5 th	-10%	10%
6 th	No Cap	No Cap

Annual Policies

Renewal	Minimum Change	Maximum Change
1 st	-19%	21%
2 nd	-19%	21%
3 rd	No Cap	No Cap

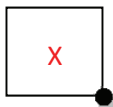

The resulting, limited LRFs will also apply to new business written during the relevant periods.

The GRID ID represents the truncated, and then concatenated, latitude and longitude coordinates of the lower right hand corner point of each GRID. For example, consider the following GRID. The black circle represents the lower right hand corner of the GRID and thus provides the coordinates to determine the GRID ID.

Assume the latitude and longitude coordinates of this point are 35.12567 and -90.7890, respectively. The first step in developing the GRID ID is to truncate the coordinates to two decimal positions. Thus, the relevant coordinates become 35.12 and -90.78. We then eliminate the decimal places and the negative sign and add any needed leading zeros, such that the latitude and longitude coordinates are each exactly 5 characters long. This results in the relevant coordinates becoming 03512 and 09078. The final step is to concatenate these coordinates, latitude first, to develop the GRID ID, which in this example is 0351209078.

The GRID ID can be derived in the same manner from any latitude and longitude coordinate pair. Assume a risk at the location designated by the “x” in the diagram below.

Further assume this location has latitude and longitude coordinates equal to 35.12585 and -90.7899, respectively. These values are first truncated to two decimal positions, resulting in the relevant coordinates becoming 35.12 and -90.78. The remaining steps above map this location to GRID ID 0351209078.

State Farm uses the geo-coding product GeoStan™ from Pitney Bowes in the assignment process described above.

The list of proposed LRFs by Coverage and GRID ID is included as an attachment.

MOTORCYCLES

We are revising motorcycle base rates and rating relativities. The average rate level change for motorcycles is -1.8%. The effects of these changes are included in the income effects as shown on the first page of this filing memorandum.

Coverage	% Change
BIPD	0.0%
Comprehensive	-0.1%
Collision	0.0%
Uninsured Motorist	-5.0%
All Coverages	-1.8%

Base Rates – The revised base rate changes were made to reach the percent changes in the table above.

Location Rating Factors – Motorcycles will use the proposed location rating factors shown above.

Age Rating Factors – We are revising the age rating factors for BIPD, Comprehensive, and Collision coverages toward the guidelines. The proposed average change by class is shown in Exhibit 17.

Model Year Rating Factors – We are moving model year factors toward the indicated rate level along with updating to a base model year of 2013 for BIPD, Medical Payments, Comprehensive, and Collision coverages.

MISCELLANEOUS VEHICLES

We are revising our rates by vehicle type as follows:

Type of Vehicle	Coverage	Average % Change
Antiques	All Coverages	1.6%

Private Passenger Trailers	All Coverages	1.1%
Travel & Camping Trailers	All Coverages	0.1%
Off-Road Vehicles	All Coverages	-5.6%

RULE CHANGES

Rule 107 – We propose to eliminate short rating. Currently, cancellation Rule 107 specifies that short rating is used for certain customer-initiated cancellations in the first policy term. With this change all cancellations will be handled on a pro rata basis. This will enable the future automation of all cancellations. At that time, most manual work will no longer be necessary to process cancellations in the first term. This change does not impact season cancellation provisions if applicable.

Additional changes are explained in the "Summary of Revisions" at the beginning of the enclosed manual pages.

Additional Filing Requirements

Enclosed Exhibit 18 provides our three-year rate change history, and Exhibit 19 provides the required underwriting profit and loss statement.

OHIO AUTO INSURANCE PROGRAM
STATE FARM FIRE AND CASUALTY COMPANY
Filing Memorandum

July 15, 2013 for New and Renewal Business

Our last general rate change in Ohio was effective November 5, 2012 and produced an increase of 1.3%.

The estimated overall effect of this filing is an increase of 1.3%. This is a companion filing to one being filed on this same date on behalf of the State Farm Mutual Automobile Insurance Company (Mutual Company).

The automobile insurance program in this company was established a number of years ago to accommodate risks which are not eligible for insurance in the parent Mutual Company. Exhibit 1 shows the actual underwriting experience in the Fire Company.

Due to the relatively small volume of auto business written in the Fire Company, the rates are established as a percentage of the corresponding Mutual Company base rates. The changes described in the Mutual Company filing along with the proposed changes described below result in the following income effects:

Coverage	Type of Vehicle	% Change Effective 07/15/2013
BIPD Liability	Private Passenger	2.2%
Medical Payments	Private Passenger	3.0%
Comprehensive	Private Passenger	1.6%
Collision	Private Passenger	0.8%
Uninsured Motorist	Private Passenger	-5.0%
Emergency Road Service	Private Passenger	11.1%
Rental & Travel Expenses	Private Passenger	-4.8%
All Coverages	All Types	1.3%

Additional Filing Requirements

Enclosed Exhibit 2 provides our three-year rate change history, and Exhibit 3 provides the required underwriting profit and loss statement.

CALCULATION OF PROJECTED INCURRED LOSSES AND ALLOCATED ADJUSTMENT EXPENSES AND PROJECTED UNDERWRITING EXPENSES

1. LOSS PROJECTION FACTORS: THE TABLE BELOW SUMMARIZES THE PROJECTED COST AND FREQUENCY AND THE CALCULATION OF FACTORS TO APPLY TO THE ADJUSTED INCURRED LOSSES AND ALLOCATED ADJUSTMENT EXPENSES. EXPERIENCE IS PROJECTED TO THE YEAR CENTERED AROUND 04/15/2014. THE PROJECTED COST X FREQUENCY IS CALCULATED AS THE PRODUCT OF THE PROJECTED COST AND PROJECTED FREQUENCY, AND THE FACTORS TO APPLY TO THE ADJUSTED INCURRED LOSSES AND ALLOCATED ADJUSTMENT EXPENSES ARE THE QUOTIENTS OF THE PROJECTED COST X FREQUENCY AND THE COST X FREQUENCY PRODUCTS FOR 2011 AND 2012.

CALCULATION OF PROJECTED VOLUNTARY UNDERWRITING EXPENSE RATIOS

WHILE OUR RATING FORMULA UTILIZES THE FAMILIAR LOSS RATIO TEST, IT IS NECESSARY TO MODIFY SUCH TEST FOR OUR PURPOSES SINCE THE UNDERWRITING EXPENSES INCLUDE ITEMS WHICH DO NOT VARY DIRECTLY WITH PREMIUMS. "FORMULA EXPENSE RATIOS" ARE DEFINED AS THE EXPENSE RATIOS THAT WOULD EXIST IF THE RATE LEVELS WERE EXACTLY ADEQUATE AND ARE DEVELOPED AS FOLLOWS:

1. THE ALL COVERAGES INDICATED RATE CHANGE IS DERIVED BY SOLVING THE FOLLOWING EQUATION:

$$(1.000 - .124) \times I.C. + G' = G \times (1.000 + I.C.)$$

WHERE, I.C. = INDICATED RATE LEVEL CHANGE

G' = PROJECTED UNDERWRITING GAIN OR LOSS RATIO

G = ALLOWANCE FOR UNDERWRITING GAIN AND CONTINGENCIES

1.000 INDICATES EARNED PREMIUM

.124 INDICATES THAT 12.4% OF THE RATE CHANGE IS ALLOCATED TO EXPENSES

THIS EQUATION REDUCES TO: $I.C. = \frac{G - G'}{.876 - G}$

2. THE ALL COVERAGES FORMULA EXPENSE RATIO IS: $F.E.R. = \frac{E + (I.C. \times .124)}{1.000 + I.C.}$

WHERE F.E.R. = FORMULA EXPENSE RATIO

E = PROJECTED UNDERWRITING EXPENSE RATIO

SUBSTITUTING $\frac{G - G'}{.876 - G}$ FOR I.C., THIS EQUATION REDUCES TO: $F.E.R. = E - \frac{(G - G') \times (E - .124)}{.876 - G'}$

3. THE ALL COVERAGES PROJECTED EXPERIENCE IS:

	2011	%	2012	%
CURRENT LEVEL E.P. *	\$ 939,788,829		\$ 935,698,725	
PROJECTED IL/AE **	611,833,043	65.1	620,235,524	66.3
PROJECTED U. E. **	349,357,088	37.2	359,702,297	38.4
PROJECTED G/L	-21,401,302	-2.3	-44,239,096	-4.7

4. THE FORMULA DERIVED IN SECTION 2 ABOVE, WHEN APPLIED TO THE ALL COVERAGES PROJECTED EXPERIENCE PROVIDED IN SECTION 3 ABOVE, PRODUCES THE FOLLOWING:

	2011	2012
E	37.2 %	38.4 %
G'	-2.3	-4.7
G	2.0	2.0
F.E.R.	36.0	36.5

* TAKEN FROM EXHIBIT 4

CALCULATION OF VOLUNTARY RATE CHANGE INDICATIONS

1. THE INDICATED RATE CHANGES ARE DERIVED BY SOLVING THE FOLLOWING EQUATIONS (LOSS RATIO TEST):

$$1.000 + \text{I.C.} = \frac{\text{A.L.R.}}{\text{P.L.R.}}, \quad \text{AND} \quad \text{P.L.R.} = 1.000 - \text{F.E.R.} - \text{G}$$

WHERE, I.C. = INDICATED RATE LEVEL CHANGE (LOSS RATIO TEST)
 A.L.R. = PROJECTED LOSS RATIO (EXHIBIT 8)
 P.L.R. = PERMISSIBLE LOSS RATIO
 F.E.R. = FORMULA EXPENSE RATIO (EXHIBIT 8)
 G = ALLOWANCE FOR UNDERWRITING GAIN AND CONTINGENCIES

SOLVING THESE EQUATIONS YIELDS: $\text{I.C.} = \frac{\text{A.L.R.}}{1.000 - \text{F.E.R.} - \text{G}} - 1.000$

2. THIS FORMULA WHEN APPLIED TO THE DATA PROVIDED IN EXHIBIT 8, PRODUCES THE FOLLOWING INDICATED RATE LEVEL CHANGES:

BODILY INJURY AND PROPERTY DAMAGE LIABILITY:

$$\frac{70.5}{100.0 - 37.4 - 2.0} - 1.000 = \frac{70.5}{60.6} - 1.000 = 0.163, \text{ OR } +16.3\% \text{ INDICATED}$$

MEDICAL PAYMENTS COVERAGE:

$$\frac{69.2}{100.0 - 36.6 - 2.0} - 1.000 = \frac{69.2}{61.4} - 1.000 = 0.127, \text{ OR } +12.7\% \text{ INDICATED}$$

COMPREHENSIVE:

$$\frac{65.6}{100.0 - 35.6 - 2.0} - 1.000 = \frac{65.6}{62.4} - 1.000 = 0.051, \text{ OR } +5.1\% \text{ INDICATED}$$

COLLISION:

$$\frac{63.2}{100.0 - 35.8 - 2.0} - 1.000 = \frac{63.2}{62.2} - 1.000 = 0.016, \text{ OR } +1.6\% \text{ INDICATED}$$

ALL COVERAGES:

$$\frac{65.7}{100.0 - 36.2 - 2.0} - 1.000 = \frac{65.7}{61.8} - 1.000 = 0.063, \text{ OR } +6.3\% \text{ INDICATED}$$

STATE FARM MUTUAL AUTOMOBILE INSURANCE COMPANY

PROVISION FOR UNDERWRITING PROFIT AND CONTINGENCIES

AUTOMOBILE INSURANCE OPERATIONS

The following analysis demonstrates that the use of a 2% combined provision for underwriting profit and contingencies, together with expected investment income, will produce an expected total return after tax for State Farm which is reasonable when compared to that earned by other industries. This will enable the company to serve the insurance needs of its policyholders and meet its obligations in a growing market. These earnings provide the only source of funds for its Policyholder Protection Fund (Surplus), which is essential to State Farm's continued growth and financial strength.

Total Financial Needs Analysis

- A. Auto insurance rates traditionally include provisions for expected losses and expenses (including an estimate of expected catastrophe losses) and a combined provision for underwriting profit and contingencies. The contingency provision reflects an allowance in the rates for losses and expenses arising from events which cannot be reasonably foreseen or predicted. It thus represents an allowance for adverse fluctuations from the otherwise expected results. The underwriting profit provision reflects the expected difference between earned premiums and incurred losses, expenses and contingencies. The need for a contingency element in the rates is generally accepted actuarially and recognized in nearly all rating laws. Over the long-term, the contingency provision will not be actually realized as an underwriting profit, but will be offset by unanticipated losses and expenses.

State Farm's underwriting profit from automobile operations, before federal taxes, has averaged -7.1% (see Page 4, Column 2) during the last 12 years. These results were generated during a period when the filed rates generally included a combined provision averaging 0.3% for underwriting profit and contingencies. Thus the contingency element has been averaging in excess of 2.0% of earned premium.

It is therefore reasonable to expect that a 2% combined provision for underwriting profit and contingencies will produce an actual underwriting result of approximately 0%.

- B. As a percent of mean invested assets, net investment income (interest, dividends and real estate income) averaged 3.8% over the past 12 years, 3.7% over the past 6 years, and 3.5% over the past 3 years (Page 5, Column 1). Based on the analysis of these results, it is reasonable to expect a return of 3.5% on invested assets during the time the rates will be in effect.

Capital gains have fluctuated between -12.6% and 7.2% of mean invested assets over the past 12 years (Page 5, Column 2). The latest 12-year average is -0.5%, the prior 12-year average is 5.5%, and the 24-year average is 2.5%. The expected contribution of capital gains during the period rates will be in effect is 2.5% of invested assets.

STATE FARM MUTUAL AUTOMOBILE INSURANCE COMPANY
(Continued)

The sum of the net investment income and capital gains as a percent of mean invested assets is expected to be 6.0% during the time the rates will be in effect.

- C. Other income, largely service charges for premium installment plans, has averaged 0.5% of earned premium during the past 12 years (Page 4, Column 3). These charges were increased in 2003, and as a result the expected income during that time the rates will be in effect is 0.7%.
- D. All of these income sources combine to yield an expected insurance operating profit of 5.2%, before tax, on earned premiums, as summarized in the table on the following page. This includes the expected investment income attributable to the unearned and advance premiums, loss, and loss adjustment expense reserves, as well as the expected underwriting results.
- E. In order to demonstrate that this profit provision is reasonable in comparison to the total after-tax return for other industries, a 2:1 premium-to-surplus ratio is used for this ratemaking analysis. A 2:1 ratio is a general measure of minimum necessary surplus that is often used for automobile insurers, without taking into account the specific risks and needs of a particular insurer. It is also generally recognized that it is prudent to maintain a larger level of surplus and that surplus needs vary from insurer to insurer. The 2:1 ratio is used in this ratemaking analysis to illustrate that even at this low level of capitalization, the rate of return is reasonable in comparison to other industries. Although a 2:1 ratio is used in this ratemaking analysis, considering the multiplicity, nature and magnitude of risks and needs to which State Farm is exposed, State Farm's surplus is and should be significantly larger to provide the financial strength that is adequate and appropriate for its policyholders today and in the future.

At a 2:1 premium-to-surplus ratio, the 5.2% operating profit would produce an expected total return, after tax, of 13.0%, as a percent of surplus.

Taking into account the equity in the unearned and advance premium reserve, the expected total return is approximately 10.9% on a GAAP adjusted basis. An expected total return in the 8% to 19% range is reasonable in comparison to the current returns of other industries. Recent returns reported in Business Week and Fortune magazines are in this range, with an average of about 11%, on a GAAP adjusted basis.

Based on the foregoing, a 2.0% combined provision for underwriting profit and contingencies can be expected to produce a reasonable total return during the time the projected rates are to be in effect. If the contingency provision is actually realized as a profit in any year, the expected total return increases to 12.9%. Such a result would still be reasonable and not excessive. If the actual premium-to-surplus ratio were used in this calculation, a lower total rate of return would result.

State Farm Mutual Automobile Insurance Company

Expected Total Return

Item	Expected Contribution to Net Income
Premium = \$100	
1) Expected Contribution from a 2 % Provision for Underwriting Profit and Contingencies; (Page 1, Item A)	\$ 0.00
2) Investment Income on Unearned & Advance Premium Reserves \$100 x (Page 6, Line 7)	\$ 0.49
3) Investment Income on Loss and Loss Adjustment Expense Reserves \$100 x (Page 7, Line 6)	\$ 3.99
4) Other Income; \$100 x .007 (Page 2, Item C)	\$ 0.70 -----
5) Expected Insurance Operating Profit, Before Tax	\$ 5.18
6) Investment Income on Surplus (at a 2:1 premium-to-surplus ratio) \$50 x (Page 5 Selected Yield)	\$ 3.00
7) Federal Income Tax equals the greater of: (Lines 1+4)x.35 + (Lines 2+3+6) x (Page 8 Reg Tax Rate) (Lines 1+4)x.20 + (Lines 2+3+6) x (Page 8 AMT Tax Rate)	\$ -1.68 -----
8) Expected Total Return	\$ 6.50
9) Expected Total Return as a Percent of Surplus Line 8 / \$50	13.0%
10) GAAP Adjusted Return Line 9/ (GAAP Adjustment factor derived on Page 9)	10.9%

Based on the foregoing, a 2.0% combined provision for underwriting profit and contingencies can be expected to produce a reasonable total return during the time the projected rates will be in effect.

Total	\$ 8,639,577,217		19.2%	17.8%

(1) Annual Statement, Page 12 for years 2009-2011.

(2) Under the Tax Laws, 15% of formerly tax-exempt income from securities purchased after August 7, 1986 is now taxable. Thirty percent of stock dividends are taxed at 35% and seventy percent are taxed at 15% of 35%. Thus, the estimated tax rates are:

Ordinary Income	35.0%
Tax Exempt Bonds	5.3% = .15 x 35%
Stock Dividends	14.2% = (.30 + (.70 x .15)) x 35%

(3) Under the Alternative Minimum Tax (AMT), a rate of 20% applies to the sum of regular taxable income and 75% of tax exempt income. The estimated effective AMT rates are:

Ordinary Income	20.0%
Tax Exempt Bonds	15.8% = (.15 + (.85 x .75)) x 20%
Stock Dividends	17.0% = (.30 + .70 x (.15 + (.85 x .75))) x 20%

Location Rating Factor Calculation - Hypothetical Example

Premium Data (Latest Year)		GRID Cell		Description
	Experience Area	Statewide		
(1)	Current Level Premium	538,362.65	7,434,807.54	Historical Premium adjusted to current rate level
(2)	Exposure	1,508.68	20,485.44	
(3)	Current Level Premium/Exposure	356.84	362.93	
(4)	Relative to Statewide	0.983	1.000	
				(1) / (2)
				(3) / SW(3)
Loss Data (Latest 3 Years)		GRID Cell		
	Experience Area	Statewide		
(5)	Non-catastrophe Loss & ALAE	1,242,458.30	16,921,597.44	(5) / (6)
(6)	Exposure	8,839.16	106,749.63	
(7)	Non-catastrophe Loss & ALAE/Exposure	140.56	158.52	(7) * (8)
(8)	Catastrophe Provision	0.200	0.200	
(9)	Expected Catastrophe Loss & ALAE/Exposure	28.11	31.70	(7) + (9)
(10)	Total Loss & ALAE/Exposure	168.67	190.22	
(11)	Relative to Statewide	0.887	1.000	(10) / SW(10)
(12)	Expense Flattening Provision	0.100	0.100	
(13)	Expense Flattened Factor	0.898	1.000	(11) * [1 - (12)] + (12)
Indicated Factor		GRID Cell		
	Experience Area	Statewide		
(14)	Present Factor	1.500	1.000	GRID cell weighted average TRF (based on exposure)
(15)	Indicated Change	-8.6%	0.0%	
(16)	Initial Indicated Factor	1.371	1.000	(14) * [1 + (15)]
(17)	Credibility Standard	1,600		Based on 90% Confidence Interval and 10% Error
(18)	Non-catastrophe Claims	1,064		
(19)	Credibility	0.815		Minimum{[(18) / (17)] ^ [0.5] , 1.000}
(20)	Credibility Complement	1.500		
(21)	Credibility Weighted Indicated Factor	1.395	0.980	GRID cell experience area weighted average TRF (see below) (16) * (19) + (20) * [1 - (19)]; SW(21) = weighted average over all GRID cells
(22)	Balanced Indicated Factor	1.423	1.000	(21) / SW(21)
(23)	Balanced Indicated Change	-5.1%	0.0%	(22) / (14) - 1
(24)	Proposed Factor	1.455		Reflects stabilization

STATE FARM INSURANCE COMPANIES

Safety, Anti-Fraud, Quality, and Expense Control Initiatives - Auto

State Farm continues to support extensive initiatives that encourage safer vehicles and roads, fight crime and fraud, assure quality and cost-effective medical expenses and vehicle repairs, and maintain efficiency and appropriate internal expense controls while providing quality service. The following lists a few of these efforts:

1. Celebrate My Drive® was developed by State Farm to be the annual signature auto safety program that changes the conversation with teens from scaring them with potential negative outcomes to sharing positive safety messages to help prevent crashes, reduce injuries, and save lives. More than 400 Celebrate My Drive events, attended by 35,000 people, took place across North America on September 15, 2012 to support new teen drivers as they explore the road ahead.
2. Supporting the Insurance Institute for Highway Safety, a scientific organization devoted to reducing human and economic loss from vehicle crashes.
3. Working with The Children's Hospital of Philadelphia to research the number one killer of teens – automobile crashes – with a goal of developing effective, evidence based interventions aimed at saving young lives.
4. Worked in conjunction with The Children's Hospital of Philadelphia to create public service announcements (PSA) on texting while driving.
5. State Farm is the presenting sponsor of MADD's Power of You(th) programs and activities. The goals are to empower teens to take a stand against drinking under age 21 in their schools, homes, and communities, to educate teens about the importance of the 21 minimum drinking age law, and to engage new and life-long supporters to carry on MADD's life-saving work.
6. Provided a grant to the Governors' Highway Safety Association (GHSA) to produce a report on distracted driving for state officials. The report summarizes: what distracted driving is, how often drivers are distracted, how distraction impacts driver performer and crash risk, what countermeasures may be most effective and what states can do to reduce distracted driving.
7. Researching factors that contribute to child injuries in crashes through support of The Center for Child Injury Prevention Studies, a National Science Foundation Industry-University Cooperative Research Center.
8. Provide funding for Project Ignition in partnership with the National Youth Leadership Council. High School students and teachers submit service-learning ideas for a school and community public awareness campaigns on the subject of Teen Driver Safety. Selected ideas receive grants to implement the projects.
9. Supporting the Inter-Industry Conference on Auto Collision Repairs, a non-profit, educational organization of auto manufacturers, collision repair shops, insurance companies and others dedicated to improving the quality, safety and efficiency of auto collision repairs.
10. Partnering with the Advocates for Highway and Auto Safety, the National Safety Council and others to promote primary enforcement seatbelt legislation and booster seat legislation on federal and state levels as well as supporting Graduated Driver Licensing laws and laws designed to control chemically-impaired driving.
11. Partnering with Meharry Medical College, a historically African-American college, to address the disparity of seat belt usage in the African American community and promote enhanced Graduated Driver License laws.

STATE FARM INSURANCE COMPANIES

Safety, Anti-Fraud, Quality, and Expense Control Initiatives - Auto

12. Supporting the Insurance Research Council, an organization that conducts research on a broad range of insurance topics.
13. Supporting the National Insurance Crime Bureau (NICB), an organization that fights insurance fraud and vehicle theft. NICB looks for patterns of fraud and theft and assists insurance companies and law enforcement in solving insurance crimes and eliminating fraudulent claims.
14. Supporting state and federal legislation to combat auto theft and fraud, including support for state anti-fraud bureaus.
15. Training State Farm claim representatives to use a computer application called "Frequency Search" that detects patterns symptomatic of fraud.
16. Reporting claims to The Insurance Services Office, Inc. (ISO) database.
17. Initiating civil litigation against unscrupulous medical providers and others to stop the submission of/recover payments made on non-meritorious claims.
18. Employing sophisticated analytics to identify overbilling trends by medical providers.
19. Sponsoring child safety seat checks in communities across the nation.
20. Advocating National Teen Driver Safety Week to promote the importance of teen driver safety issues.
21. Providing evidenced-based safety programs to the public to assist novice drivers as they learn to drive.
22. Encouraging auto manufacturers to design cars that are more damage- and theft-resistant and easier and less costly to repair.
23. Helping State Farm claims representatives determine crash damage due to defective auto parts. Claims Research Auto Support Hotline (CRASH) provides a method for tracking auto trends that may influence automakers to take action on defective parts and issue automobile recalls. This also leads to increased subrogation.
24. Using alternative dispute resolution whenever possible as a more efficient and timesaving alternative to lawsuits in disputed claims.
25. Implementing new Auto and Fire Claims operating models to promote consistency and efficiency in claims handling.
26. Effectively managing expenses by efficiently using the services State Farm purchases and by regularly auditing telephone bills.
27. Effectively managing expenses by purchasing data processing and office equipment through a competitive bidding process.
28. Reviewing and reorganizing corporate and operations center departments in the ongoing effort to streamline processes, eliminate duplication and provide continued quality service.
29. Providing convenient, cost effective, 24 hour service 365 days a year through our Customer Response Centers.

STATE FARM INSURANCE COMPANIES
Safety, Anti-Fraud, Quality, and Expense Control Initiatives - Auto

30. Using the Internet to efficiently communicate with both current and prospective policyholders.
31. Annually conducting a media outreach communicating the magnitude of damage produced each year in the United States by deer-vehicle collisions and offering tips on how drivers can improve their chances of avoiding such collisions.
32. Working to implement an electronic parts ordering platform to increase efficiency and promote more competitive parts pricing.
33. Supporting emergency responder training by donating salvage vehicles for temporary use.
34. Supporting the National Auto Body Council (NABC), a not-for-profit organization committed to the goal of improving the image of all dedicated collision industry professionals. Continue to donate vehicles to families in need through the Recycled Rides™ Program and fire department training through the First Responders Emergency Extrication Program.
35. Supporting the Collision Industry Conference (CIC), a forum where collision industry stakeholders come together to discuss issues, build broad understanding, find common ground and communicate to the industry at-large, findings and possible solutions.
36. State Farm conducts an annual survey regarding distracted driving focusing on the use of electronic devices while driving. We publish the results in the form of a news release that is designed to inspire media attention to the issue.

Attention: Ben Beckman

Our responses to each of your numbered questions from May 23, 2013 follow.

Objection 1

Ohio Revised Code § 3937.03 (A) state Every insurer shall file with the superintendent of insurance every form of a policy, endorsement, rider, manual of classifications, rules, and rates, every rating plan, and every modification of any of them which it proposes to use. Every such filing shall state any proposed effective date and indicate the character and extent of the coverage contemplated. When a filing is not accompanied by the information upon which the insurer supports such filing, and the superintendent does not have sufficient information to determine whether such filing complies with sections 3937.01 to 3937.17 of the Revised Code, he may require such insurer to furnish the information upon which it supports such filing...

The proposed Location Rating methodology (manual page 454 of 486) references a State Farm web site. Provide a revised Location Rating Factor Reference page (page 454 of 486) that includes the steps/rules for determining the GRID ID based on latitude and longitude.

Also include revisions to the manual page to clarify the applicability/use of Location Rating Factors and Territory Rating Factors. Such should be clearly mutually exclusive.

We have revised the Location Rating Factor (LRF) Reference manual page to include the steps/rules for determining the GRID ID. We have revised the Location Rating Factors section to clarify the applicability and use of Location Rating Factors and Territory Rating Factors.

The revised manual pages are attached.

Objection 2

Verify that any and all updates to the GRID IDs will be provided to the Ohio Department of Insurance as part of future filings.

The GRID IDs are based on latitude and longitude coordinates. These values are constant and will not be changing. If the methodology of determining the GRID ID or size of the GRID were to change in the future, a filing would be made at that time.

Objection 3

Provide a summary exhibit that lists the weighted average indicated GRID ID Location Rating Factors (LRFs) side-by-side with the corresponding selections by decile groupings of GRID IDs. List the decile groupings from highest weighted average indicated LRF to the lowest. Include a detailed memorandum explaining the calculations utilized in the summary exhibit.

Supplemental Exhibit A shows side-by-side comparisons of the weighted average indicated LRFs and selected LRFs by decile and coverage. The deciles are based on the distribution of private passenger auto policies in force as of January 2013, the same data sample used in the re-rating of policies for the overall rate change. The indicated and selected LRFs were grouped by GRID ID and the weighted average indicated and selected LRFs were calculated for each decile based on the distribution of indicated LRFs. We believe the selected LRFs are moving to the indicated levels in a reasonable way.

The procedure for determining the indicated and selected LRFs was defined in the original filing memorandum.

Objection 4

Verify that all selected GRID ID LRFs are at or below the indication.

Not all selected GRID ID LRFs are at or below the indicated LRFs. Rather, almost all of the proposed LRFs fall between the present Territory Rating Factors (TRFs) and the indicated LRFs. This is similar to the movement of rating factors to or towards the indicated rating factor included in many rate filings.

There are some cases in which the proposed LRFs fall outside of the range between the present TRFs and the indicated LRFs. However, the proposed LRFs never move more than 0.2% in the opposite direction of the indicated LRFs. These movements in the opposite direction are the result of off-balancing all factors to result in an overall neutral effect statewide.

Objection 5

Provide an estimate for the completion of movement of all insureds to the selected GRID ID LRFs.

Please refer to the response to Objection 6 and Supplemental Exhibit B.

Objection 6

Provide an exhibit that displays the estimated distribution of the book of business that will be at the selected GRID ID LRFs each year until completion.

Supplemental Exhibit B shows the estimated number of policyholders that will have moved to their ultimate GRID ID LRFs at each renewal after the effective date of this rate revision.

The proposed LRFs were selected by limiting the movement between the present average TRFs and the indicated LRFs at +/- 5%. After the first renewal, 96.2% of policies will be at the proposed GRID ID LRF as shown in the exhibit.

As explained in the original filing memorandum, we will be stabilizing the movement to the proposed LRFs for policies in GRID cells located in more than one territory. In these cases, current rate levels could vary across the territory boundaries. The changes in LRF for the impacted policies will be limited at each renewal for the first five semiannual renewals and the first two annual renewals. As a result, the number of policies that have reached the selected GRID ID LRFs increases with each renewal after the effective date as shown in the exhibit.

LOCATION

This section provides details on the location rating factors and territory definitions.

LOCATION RATING FACTORS

The following procedure applies to determine the Location Rating Factors for private passenger automobiles, motor homes, motorcycles, and named non-owner policies

- A. Determine the location of the address used to determine the territory of the vehicle.
- B. If the location qualifies for Location Rating Factors, the Location Rating Factor used for each applicable coverage will be no more than the Territory Rating Factor (either Private Passenger, Motorcycle, or Motor Homes) times the factor in the Maximum Effective Date Factor table below, and no less than the Territory Rating Factor (either Private Passenger, Motorcycle, or Motor Homes) times the factor in the Minimum Effective Date Factor table below. If the factor shown in the table is "N/A", then the Location Rating Factor applies.

Maximum Effective Date Factors		
Policy Term	Current Policy Effective Date	Factor
Semi-Annual	Prior to 01/15/2014	1.100
Semi-Annual	01/15/2014 and Later, but Prior to 07/15/2014	1.210
Semi-Annual	07/15/2014 and Later, but Prior to 01/15/2015	1.331
Semi-Annual	01/15/2015 and Later, but Prior to 07/15/2015	1.464
Semi-Annual	07/15/2015 and Later, but Prior to 01/15/2016	1.610
Semi-Annual	01/15/2016 and Later	N/A
Annual	Prior to 07/15/2014	1.210
Annual	07/15/2014 and Later, but Prior to 07/15/2015	1.464
Annual	07/15/2015 and Later	N/A

Minimum Effective Date Factors		
Policy Term	Current Policy Effective Date	Factor
Semi-Annual	Prior to 01/15/2014	0.900
Semi-Annual	01/15/2014 and Later, but Prior to 07/15/2014	0.810
Semi-Annual	07/15/2014 and Later, but Prior to 01/15/2015	0.729
Semi-Annual	01/15/2015 and Later, but Prior to 07/15/2015	0.656
Semi-Annual	07/15/2015 and Later, but Prior to 01/15/2016	0.590
Semi-Annual	01/15/2016 and Later	N/A
Annual	Prior to 07/15/2014	0.810
Annual	07/15/2014 and Later, but Prior to 07/15/2015	0.656
Annual	07/15/2015 and Later	N/A

If the location does not qualify for Location Rating Factors, use the Territory Rating Factors (either Private Passenger, Motorcycle, or Motor Homes).

Policies with locations that do not qualify for Location Rating Factors generally fall under the following two scenarios:

- Location address cannot be matched to USPS data - missing or invalid house number, street name, city, and/or ZIP code.
- Location address can be matched to USPS data, but there is insufficient information to determine an accurate latitude/longitude - can occur with P.O. Boxes, rural areas, a blank street on the policy, and/or new subdivisions.

At subsequent renewals, policies will be reviewed to determine if an accurate latitude/longitude can be determined. If it can be, policies will then transition to using Location Rating Factors.

Note: Updates to data obtained from non-State Farm sources, such as those used to determine latitude and longitude, will be used in the subsequent determination of the LRF.

LOCATION RATING FACTOR REFERENCE

For locations qualifying for Location Rating Factors, use the factors at:
<http://b2b.statefarm.com/B2BRateGridReq/jsps/pages/rateGridRequestForm.xhtml>

To determine the GRID ID for a given location follow the steps below:

1. Truncate the latitude and longitude coordinates to two decimal positions.
2. Eliminate the negative sign on the longitude coordinate.
3. Remove the decimal points on the latitude and longitude coordinates.
4. Add leading zeros to the latitude and longitude coordinates as needed, such that the latitude and longitude coordinates are each exactly 5 characters long.
5. Connect these coordinates together into one string, latitude first, to develop the GRID ID.
